Additional Standard HSA Preventive Drug List

Effective January 1, 2026

Your employer has elected to include an HSA Preventive Drug coverage feature with your prescription benefit plan. Below is the list of medications available under your HSA Preventive Drug coverage, allowing you to receive coverage even if you have not met your deductible. Benefits will be provided in accordance with U.S. Department of the Treasury and Internal Revenue Service (IRS) guidance with Health Spending Accounts (HSAs) and qualified High Deductible Health Plans (HDHPs), which is subject to change based on updates. IRS Notice 2019-45 provided additional guidance as to when drugs on the Additional HSA Preventive Drug List can be classified as a "preventive drug." Medications are considered preventive care when they are taken by a person who has developed risk factors for a disease that has not yet become clinically apparent, or to prevent the reoccurrence of a disease from which a person has recovered. Beginning July 1, 2021, drugs and/or supplies listed below will only process pre-deductible with diagnoses that meet the definition of preventive care according to IRS guidance. Members seeking HSA Preventive Drug coverage who are new to the plan and/or do not have an appropriate diagnosis within medical claims may have their provider submit a medical diagnosis attestation by completing the HSA Request Form located at the website on the back of your member ID card.

The drugs listed below are grouped into broad categories. Each category includes an alphabetical list of drugs. Please verify with your plan if a generic drug must be tried before filling a brand version of a drug. **Please refer to your benefit materials for coverage details and the plan website for current information as this publication is subject to change.**

Generic prescription drugs are shown in lower-case boldface type. Most generic drugs are followed by a reference brand drug in (parentheses). Reference brands may not themselves be covered, please check your benefit. Some generic products have no reference brand. Brand prescription drugs are shown in capital letters followed by the generic name. Generic medicines are available for many of the brand-name drugs listed though may not be available in all strengths.
